Sound quality by design

IsoAcoustics expands on Aperta Series with new Aperta Sub isolation for subwoofers

A clever solution to maximize your enjoyment of bass (whilst keeping the neighbors happy)

Markham, Ontario- May 18th, 2021 – IsoAcoustics adds to their award-winning line of isolation products with the **Aperta Sub**, an isolation stand designed for subwoofers weighing up to 80 pounds (36.3 kg). The **Aperta Sub** allows the listener to discover greater bass definition from their subwoofer with less complaints from their neighbors.

More bass less rattle

We are hard-wired to pick up bass rhythms more than other tones, and low bass frequencies allow the listener to feel a deep syncopated connection to their favorite music or movies. The large pulsating driver produces energy and vibrations that travel through solid structures that create issues in the listening space and can often be disturbing to others. Room treatment can be costly and doesn't mitigate structure borne-noises. Enter the **Aperta Sub** isolation stand that not only reduces these disturbances, but also delivers better sounding audio.

Expanding on the success of the Aperta line, IsoAcoustics created the **Aperta Sub** that effectively manages the energy from the subwoofer resulting in tighter bass response and greater clarity. Decoupling the subwoofer from its supporting surface, the **Aperta Sub** manages the energy from the subwoofer and prevents the physical transfer of energy through the supporting structure.

Greater bass definition

The design of the **Aperta Sub** is simplicity itself: it consists of top and bottom isolators, each connected by a rigid frame that provides a stable base and lifts the subwoofer off the floor. Aperta means 'open' in Italian, which describes the stands' stylized design that creates open space and compliments its surroundings. The patented IsoAcoustics isolators are directional and designed to be aligned with the subwoofers drivers to maintain the energy on-axis. The **Aperta Sub** provides a high degree of isolation and cleans up the muddy low-frequencies to reveal more bass definition.

The **Aperta Sub** has an innovative shape that provides stability and avoids interference with existing subwoofer feet. It has a low-profile and compact design, measuring 10.5" W x 11.5" D x 1.3" H (265mm x 290mm x 33mm) and is made to be used with front-firing and side-firing subwoofers that weigh up to **80 lbs (36.3kg)**. The **Aperta Sub** also includes **carpet disks** which feature 0.6" (15mm) spikes that anchor into carpeted surfaces for a stronger connection.

The **Aperta Sub** is a must-have for home theater lovers, HiFi enthusiasts, and bass junkies of all ages and is especially beneficial for those who live in apartments or condos. The IsoAcoustics **Aperta Sub** will be available in the US today, May 18th and in the EU on June 7th.

About IsoAcoustics

Founded in 2012 by Dave Morrison, IsoAcoustics Inc. is a manufacturer and distributor of isolation products used in the home audio and pro audio industries. IsoAcoustics patented technology is based on Dave's 20-year experience planning and building radio and television studios at the Canadian Broadcasting Corporation. Based on patented designs, IsoAcoustics has developed products for the Professional Audio and home project studio, the HiFi and consumer market, and large applications that include Pro Audio, HiFi, and Live sound. IsoAcoustics speaker stands provide superior acoustic isolation and enhance the sound clarity of any speakers, including studio monitors, home audio systems, and sound reinforcement.
